Crystal Cable announced a new line of cables that start where the company's popular Absolute Dream end. Called the Ultimate Dream, and beginning with the power cord, the new top-end cable uses seven monocrystal conductors in place of the four used in the Absolute Dream (six silver conductors wrapped around a seventh silver-gold core). The new design is intended to reduce AC-bourn magnetic and electromagnetic distortion to a new low, and other cables in the Ultimate Dream line will be expected later in the year. Meanwhile, stablemate Siltech announced a new flagship Triple Crown power cord. This takes the same monocrystal structure (but utilising Siltech's own developments and voicing) to extend the company no-compromise Triple Crown line of interconnects and loudspeaker cables. Expect to pay around €12,500 for a 1.5m Ultimate Dream, and around €13,500 for the Triple Crown; two cables from the same stable, different construction and sound, but alike in awesome!
