The Siltech Triple Crown power cable uses seven conductors, each of which is 2.2mm in diameter. According to Edwin Rynveld, Siltech's founder and chief designer, this enables the Triple Crown to carry very high current. He also said that the shield keeps magnetic distortion inside the cable itself, due to the configuration of the conductors. This feature is said to prevent distortion in other surrounding cables. The Triple Crown's price is €12,900 per 1.5m cord.
